BRING IN TRAFFIC & BOOST SALES
with Dynamic LED Message Signs
for Commercial

WHY?

The Answer Is Simple:
LED Signs are a **One-Time Investment** for **On-Premise Targeted Advertising**
that advertises & brands your business with custom content that speaks to your community
about WHO you are, WHAT you do, and HOW you do it better**…in real time…**
that you can **change as often as you like** from anywhere, anytime.

When Compared To:
Print, Radio, or TV advertising at a **one-time expense** for an **ad that only appears once;**
costs more per exposure to a broader audience that, hopefully, is interested in your business,
sees or hears your ad, and knows where you are located.

HOW?

We'll help determine the proper LED sign size for your location
Simply login from any PC, Mac, or iPad and start controlling your own advertising.
Use the online message editor, create schedules, assign multiple users, & more.

Display Dynamic Messages and Bring In Traffic

Graphic Library

Doodle Message Editor

What is it? SM Infinity™ is 100% cloud-based software.

It resides on a central server that you can access through a secure Internet connection. There is no software to load, no CDs to keep track of, and you're always using the latest version , plus all your content is organized securely online and backed up daily.

How do I use it? Internet Web or Mobile Access

Simply login securely at www.sminfinity.com and start controlling the LED sign from any PC or Mac connected to the internet, or simply launch the app on an iPad or iPad mini, or use any other mobile tablet via it's internet browser.

Is it better? Compared to local software

Most operating software restricted to one computer via a verification code or a dongle key and demands you to learn the software, be the graphic artist, and send messages with little to no help. Our software allows multiple permission-based users who can operate the sign from any computer.

What makes it different? Personalized Content Creation

SM Infinity™ is the only software to have the personal attention of professional graphic designers standing by via an integrated request form to create custom dynamic content specifically for your LED sign, or use Doodle™, our online message editor for a quick message, or upload any graphics/animations you created.

What's the true beauty of cloud-based software?

Features and Updates
Everytime you log in, you are always using the latest version and the best features available.

Emergency Alert Service:
Amber Alert or Severe Weather coming?
The LED sign can automatically help alert the community using IPAWS (Integrated Public Alert & Warning System) made by FEMA (www.fema.gov/IPAWS).

Conditional Messaging:
Is it getting hot outside?
The LED sign can automatically display "Cold Drinks for Sale".

Reporting:
Knowing what, when, and how long each message is playing is valuable information to compare to your sales reports.
